Data Appendix

Group 4: Kelly Kohout (leader), Logan Lee, Shreeja Tangutur
DS 4002: Project 3

Section 1: Food Classification Uncleaned Data

1.1 Unit of Observation

Each row represents one food item, ranging from fruits to vegetables to common fast food items.

1.2 Dataset Description

This dataset contains a “train” folder that is then broken down into specific categories with the folder headings as the description of the food-associated images. For example, the “Apple” folder contains several pictures of apples.

1.3 Data Variable Explanations

Image Food Type	Image Food ID	Image Example
Avocado	0bcc16f7cbe2e5bbab2c19917268d072_jpg.rf.fdiGFOooyK6f6J1vgoS5.jpg	
BBQ Pizza	6988f103a71074f6086c86a969de3d40_jpg.rf.f78qinTuZvefcPv1mVl.jpg	

1.4 Statistics

- Total images: 738
- Total descriptive folders: 76

1.5 Figures

- N/A

Section 2: Food Classification (Cleaned Dataset)

2.1 Unit of Observation

Each row represents one food item, ranging from fruits to vegetables to common fast food items.

2.2 Dataset Description

This dataset contains a “train” folder that is then broken down into specific categories with the folder headings as the description of the food-associated images. For example, the “Apple” folder contains several pictures of apples. However, this dataset is different from our first one as we have removed any ambiguous food folders. For example, condiments are difficult to classify as healthy or unhealthy. We also moved “unlabeled” foods by looking at the images into their correct category.

2.3 Data Variable Explanations

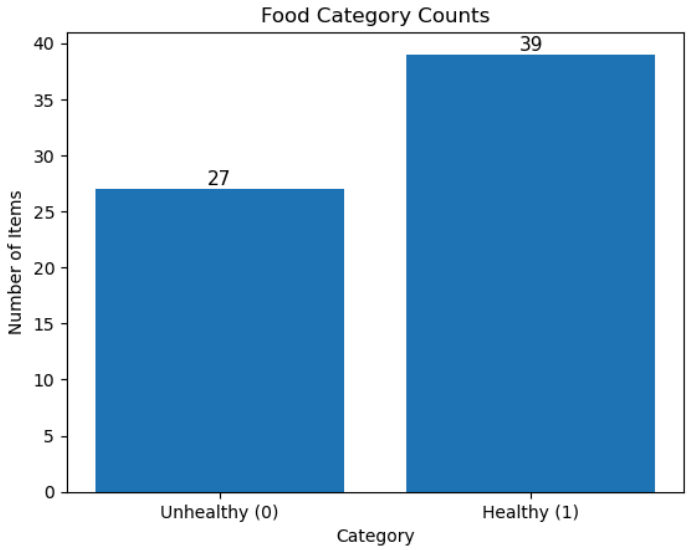
Image Food Type	Image Food ID	Image Example
Avocado	0bcc16f7cbe2e5bbab2c19917268d072_jpg.rf.fdiGFOooyK6f6J1vgoS5.jpg	
BBQ Pizza	6988f103a71074f6086c86a969de3d40_jpg.rf.f78qinTuZvefcPv1mVl.jpg	

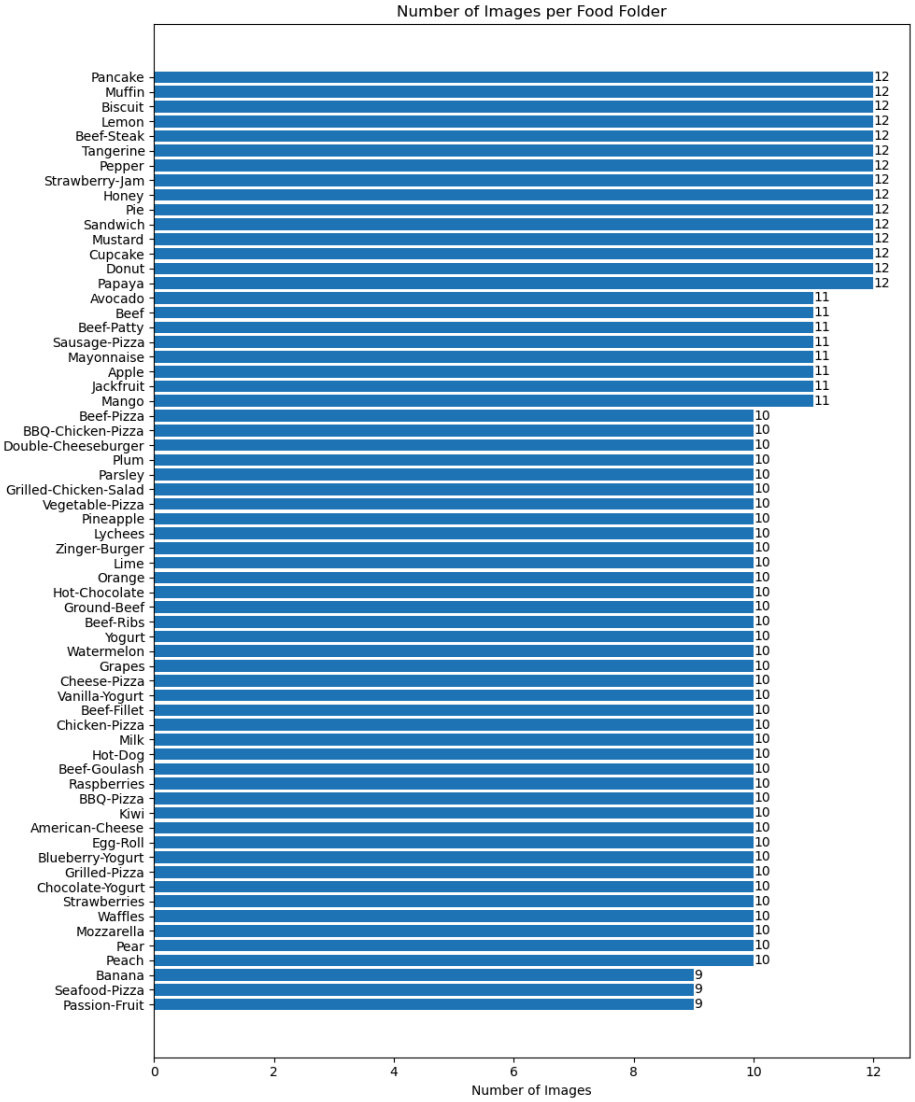
2.4 Statistics

- Total images: 633
- Total descriptive folders: 64

2.5 Figures

- Distribution of healthy versus unhealthy food counts





- Distribution of food types among categorical labels
